

How to be a Winner in Mathematics

Corollary

To be a winner in an subject is simple. Love the subject. You should have a burning zeal to understand the subject. Getting marks, comes, as a corollary.

Theorems

It is by understanding, each and every step in the theorems, following the logic, behind the development of the arguments and being convinced about what one has studied, that one, masters the subject. You have to practice, as many problems as possible to see, how, the theorem or theory is applied. It is better to practice those questions, which are direct in approach. This is not the time, to take up complicated questions and try to solve them in half an hour. There is an easy way of approach for anything i.e to go to the heart of the problem.

Repeating Verbation

By repeating verbatum, whatever is given in the text-book, you can score high in certain subjects. But, this disease of quoting, text books, is very difficult to be cured , even years later.

Kink in Thinking Graph

You can only learn, by learning, how to think for the subject. The moment, you are not convinced, about the steps in proving a theorem, or standard example, it is time to consult the teacher. The kinks, in thinking, can be removed, in two minutes. However, as long as, the kinks in thought processes remain, the subject will never be understood correctly.

Probability Games

You should never play 'probability games' with questions. Every topic is important. If you want to be a doctor, you cannot neglect, to study the difference in the functioning of the kidney, and the heart, just because, normally this question is not asked.

Let's Go in Examination Hall Now

First grab, as many marks, as you can, by answering the easiest questions first and then take up the questions for which you do not know how to attack the problem. For the sake of the probability of getting five more marks, you cannot afford to lose fifteen marks about which you are sure.

Solution of the Problem

Have confidence in yourself. After all you have studied the subject for the years. Forget it, you cannot. It is very simple to be a champion . You have to decide, to become a champion; then you can be the one. So be a champion
